

Issue #1852

/* breaks JSON tokenization

```
{
  "A": "/*",
  "B": "B",
  "C": "C"
}
```

Last member loses its colors

Shared hypotheses

- H1 comment matches "/*"
- H2 comment is first key
- H5 comment covers "B"

</> Codebase

components/
prism-json.js
prism-core.js

1 Thinking It Through Code Agent

read_source prism-json.js:1-19
search_source "greedy" prism-core

```
prism-json.js
2 'comment': /\//\.*|\//\*.../,
3 'property': {..., greedy: true},
7 'string': {..., greedy: true},
```

Report

'comment' is first, not string-aware.
Apply string rules before comments.

2 Trying It Out Browser Agent

reproduce prism.js, Chromium
actions open, dom, screenshot

```
observed tokens
"A": "/*",
"B": "B",
"C": "C" text | string | text
```

Report

No comment token. "C": "C" splits.
Keep // and /* */ as comments.

3 Patch generator Z

```
components/prism-json.js ✓
@@ -1,11 +1,16 @@
- 'comment': /\//\.*|\//\*.../,
+ 'property': {..., lookbehind: true},
+ 'string': {..., lookbehind: true},
+ 'comment': {..., greedy: true},
```

From both reports and all tool observations

4 Frozen replay no model calls

```
same scene, patched
"A": "/*", ✓
"B": "B", ✓
"C": "C" ✓
```

- ✓ Every key and value highlighted
- ✓ // and /* */ stay comment tokens
